- Frameworks: Spring, Spring MVC, Spring Test, Spring Security, Spring Data, Spring Boot, JSF, JSP, Javascript, Hibernate, JPA, EJB, JDBC, CDI, Sonar, Jenkins, Junit, Angular *all versions*, VueJS, NodeJS, HTML5, CSS, Bootstrap, JBoss Seam, Swing, iReport and Drools.
- Build, Code Validation and Continuous integration Tools: Maven, Gradle, Gulp, Webpack, Jenkins, Hudson, Travis-CI, Docker, Docker Compose, Sonar, PMD, Checkstyle and Findbugs.
- Databases: PostgreSQL, MySQL, Oracle, SQLServer, CouchDB e MongoDB
- Methodologies: Scrum, Kanban, TDD.
- Knowledge in UML, Design Patterns, REST APIs, SOA, BPM.
- Enthusiast on other platforms and languages how to Android, Scala and AWS.

Professional Background (last 4 companies)

Apr/2015 - Present   **Prime IT Services**

- Software Engineer

My job ranges from performing architectural validation, checking patterns and quality of code as well as refactoring them to adapt to customer patterns and TDD practices.

Construction of new architectures in new projects for customers or potential company products.

Mentoring and leadership of software factory operations teams, acting as a focal point of high complexity questions and troubleshooting.

Main projects in which I worked.

Architecture specialist at BNDES client, encompassing the following environment.

Java EE (JSF, JSP, CDI, EJB)
JUnit

Igor Henrique de Araújo - Curriculum Vitae

Websphere Application Server
Websphere Process Server
Websphere Integration Developer
Business Process Manager (BPM)
Sonar
Jenkins

Critical Design of calculation and payment generation of ISS to local municipalities for the client Cielo.

Java 8
EJB
JUnit
Spring MVC
Weblogic
Bootstratp

Validation, homologation and componentization of responsive Web / Mobile Architecture in Bradesco client.

Angular 4
Java EE
Websphere
Webpack
Gulp

Leadership and mentoring in Bradesco projects in the operation of the software factory.

Java EE
CDI
JSF

Parameterization and rule execution engine for client Odontoprev (Currently)

Microservice Architecture
Spring Boot
VueJS

Webpack
Docker
Docker Compose
Jenkins
Sonar

Jun/2013 - Mar/2015   **Bemobi**

- Senior Analyst Developer / Tech Leader

Working with Value Added Services (VAS) integration solutions from Telecom operators, mobile subscriber services and purchase of standalone media.
With responsibility for creating new services and improvements in integration platforms.

Main Environment: Java, Spring, Spring MVC, Spring Boot, Hibernate, Camel, EJB, Microservices, Jenkins.

Architecture jobs: Deployment of a URL Shortener and creation of a client project for the same API for communication of other company projects.
Communication clients projects with company partners.
API deployment for communication with Google Analytics and abstraction of usual company features.

I started and created the architecture of a project with Drools to implement a rule engine for use in all company services, the project was continued by the team and put into production later.

Main Company Platforms:

Subscription - Platform responsible for performing the subscription cycle in a certain service (Sign, renew and cancel).

Infosender - Platform responsible for firing SMSs from content, news broadcasts and advertisements, urgent news and others.

MUM - Platform responsible for communicating with the operator's VAS for receiving and sending SMS and charging for services.

Bemobi API - API developed internally for use of company resources by content partners and services.

INPO - Platform that functions as a "state machine" that has the responsibility of checking the text sent by the user in the SMS and responding accordingly.
